

# Prompt chain documentation

In this project, I'm using a technique called chain prompting - a step-by-step method where I guide an AI (like ChatGPT) through a series of smart prompts to create a full YouTube video. From choosing the topic and title, to writing the script, designing the thumbnail, and generating the final video, every part is created using AI tools like DALL E, Pictory, Canva, and ChatGPT. This approach helps beginners create high-quality content without needing advanced skills. I'm doing this to explore how anyone can make money using AI creatively and efficiently
